ABOUT US

Founded in 2002, **EDU Market** was one of the first organizations focused on enhancing and modernizing the educational status by investigating cutting-edge technology in addition to tutoring methods and equipment that may be imported and implemented.

EDU Market includes activities such as supplying, installing, and training for engineering labs, communication, robotics, medical and analytical labs, measuring and testing instruments and equipment, in addition to various other accessories.

With a history of success and a network of relationships with manufacturers worldwide, we provide you with the best products and solutions that meet your requirements, considering factors that shape the project and your demands.

MISSION

- Present realistic processes that explain the most intricate elements of every aspect needed.
- Enhance small and large group communication, interaction, and collaboration in the areas of education and training.
- Develop and qualify teams that can handle and participate in any science's application-based aspects.
- Offer a variety of goods that can help our clients quickly reach their goals in training, testing, and education.

SERVICES

Our services are distinctive because they are continuous. Our adaptability and the solid communication we have with manufacturers mean we deliver results against all odds and external challenges.

Aside from providing products, after-sales service, and maintenance in a wide range of activities and specializations, we place a strong emphasis on training because structured training ensures that you have consistent experience and background knowledge.

Our staff prioritizes finding and offering the best products that you may require, in addition to delivering a complete project that includes supplying a solution, products, installation, and training.

Our vision is to continuously improve our rating among engineering, medical, testing, and renewable energy suppliers, provide pioneering state-of-the-art technological solutions, and the best professional training value regardless of project, order size and profitability.

We offer to provide a wide Variety of Instruments, Tools, and Accessories in Addition to Training Labs / Kits for the following topics:

- Communication
- Microcontroller and Microprocessor
- Electrics and Electronics
- Programing
- Robotics
- Pneumatic and Hydraulic
- Mechatronics
- Mechanics of Material
- New and Renewable Energy
- Chemical Engineering
- Thermodynamics & Thermostatics
- Food Technology
- Building Insulation
- Pharmaceutical and Dental
- Medical and Biomedical
- Languages

In Addition to Other Instruments and Measuring Systems Such as:

- Pollution Measuring System
- Weather Stations
- Indoor Light Testing Laboratory
